# Brain Injury and **Domestic Violence**

Domestic Violence is recognized as a leading cause of Traumatic Brain Injury (TBI). Abusers target the head, neck and face more than any other area of the body, which creates the potential for brain injuries. Brain Injury must be considered when working with survivors.

20 Million	As many as 20 million women each year could sustain a brain injury caused by domestic violence.
85%	In 1 study of women who experienced DV, 85% experienced blows to the head; for 50% of them, it was too many times to count.
83%	In the same study, 83% were strangled (which can lead to a brain injury from lack of oxygen), 88% were strangled multiple times.
26%	Men are victims of domestic violence, too. 26% of men report domestic abuse in their lifetime.

**BEST** PRACTICE

**Domestic Violence** personnel should:

- **SCREEN** for prior history of Brain Injury
- **ASSESS** Cognitive & Functional Impairment
- **EDUCATE** staff on Brain Injury
- **EDUCATE** the person about their Brain Injury
- **PROVIDE** and **TEACH** Accommodations
- **CONNECT** person served with Community Resources

COMMON **PROBLEMS** 

After Brain Injury, we often see problems with:

- Attention, memory and new learning
- Slowed speed of processing
- Organization, problem solving & impulsivity
- Irritability, frustration & agitation
- Balance, dizziness & headaches
- Poor awareness of deficits & difficulties
- Difficulty being flexible, poor self-monitoring

**WHAT TO LOOK FOR** 

**Domestic Violence** personnel may see: •

- Missing information because they cannot pay attention
- Difficulty assessing danger, making decisions related to safety
- Slow to follow directions because they cannot process quickly
- Difficulty adapting to living in a shelter
- Falling into things, often getting hurt
- Vulnerability to being exploited by others
- Gets stuck on an idea or a way of doing something, does not recognize mistakes

15.5 MILLION children witness domestic violence per year. Women often seek shelter before treatment for injury.

## Common Accommodations for Brain Injury Challenges

#### Here are some common and simple accommodations:

- Working for shorter periods of time
- o Getting rid of distractions around you, like noise or movement
- Taking notes (on paper, in a notebook, on a phone or computer)
- Using a phone to set timers to remember appointments
- Repeating information to the person
- o Slowing down when talking; giving them more time to respond
- Giving the person a list of house rules, written directions, or pictures to help them understand and remember
- o Coaching the person with the injury to "Stop, think and plan" then act
- o Coaching the person to take deep breaths when feeling angry or anxious
