

Disability Health Resources

About Disability

The National Centers for Disease Control and Prevention estimates 29.5%, or almost **one in three Tennesseans, are living with some form of disability**. According to the CDC, that's higher than the national average of 25.6%, or about one in four Americans.

A disability is any condition of the body or mind (impairment) that makes it more difficult for the person with the condition to do certain activities (activity limitation) and interact with the world around them (participation restrictions).

There are many types of disabilities, such as those that affect a person's:

- Vision
- Movement
- Thinking
- Remembering
- Learning
- Communicating
- Hearing
- Mental health
- Social relationships

[CDC.gov](https://www.cdc.gov)

Although “people with disabilities” sometimes refers to a single population, this is a very diverse group of people with a wide range of needs. Many types of disabilities fall under mental health, hearing impairment, etc. Two people with the same type of disability can be affected in very different ways. For example, one person with brain injury may have changes in vision and difficulty with memory and another person with a similar injury may experience challenges in communicating and social relationships. Some disabilities may be hidden or not easy to see.

According to the World Health Organization, disability has three dimensions:

1. **Impairment** in a person's body structure or function, or mental functioning; examples of impairments include loss of a limb, loss of vision or memory loss.
2. **Activity limitation**, such as difficulty seeing, hearing, walking, or problem solving.
3. **Participation restrictions** in normal daily activities, such as working, engaging in social and recreational activities, and obtaining health care and preventive services.

People with disabilities, like all people, are complex. They may have more than one type of disability. Additionally, their network of supports; lifestyle and health related choices; access to resources; geographical location; employment and benefits; and self-advocacy skills are some of the many factors that contribute to an individual's experience of living with disabilities.

Intersectionality with Brain Injury

Traumatic Brain Injuries (TBIs) are a leading cause of death and disability in the United States. Over 5 million people have a permanent disability related to Brain Injury – or 1 in 60 people. (BIAA.org) One study found that just over 47% of people 40 or older with a history of Brain Injury live with a disability in at least one area of functioning. (Schneider, Wang, et al., 2021).

TBI has long been called a “silent epidemic” because disabilities following Brain Injury often cannot be readily seen. The large number of anoxic brain injuries (caused by lack of oxygen) from drug overdose has more recently been referred to as the “second silent epidemic.” “Even within the disability community, the issues affecting persons with severe Brain Injury are largely invisible and marginalized. (Fin, 2015)

Intersectionality with Brain Injury continued:

Some disabilities put people at a higher risk of sustaining a TBI. This list includes autism, hearing or visual impairment, balance changes, muscle weakness and cognitive impairment. These conditions may make it more likely that someone might trip and fall or exercise poor judgement which leads to an accident. They may be in greater danger of being a victim of physical and/or domestic violence. In addition, a prior Brain Injury makes it more likely someone will sustain another Brain Injury.

Common changes following brain injury include reduced memory and attention, decreased problem-solving and organization, changes in judgment and impulse control. It is important to watch for any changes in abilities that might indicate a new brain injury has occurred.

- Screening for a prior history of Brain Injury is recommended at every medical visit.
- Cognitive screening for those identified with an injury is recommended.
- Relevant strategies and accommodations should be taught to the individual to compensate for the changes and to those working with him or her.
- Those accommodations should be built directly into programs whenever possible. For example, breaking down instructions into smaller parts and using visual aids.

The resources listed below are for disability in general. For information on a specific disability, please search online to find national or state advocacy groups and more information.

Screening Tools

[Substance Abuse Screenings in Tennessee \(SBIRT-TN\)](#) Screening, Brief Intervention, and Referral to Treatment: SBIRT is a substance abuse screening and referral to treatment initiative. It is patient-centered and offers education and early intervention to identify and address substance misuse in primary care settings. Patients are asked about their substance use confidentially.

Some important milestones in the disability rights movement

[Rehabilitation Act of 1973](#): The Rehabilitation Act prohibits discrimination on the basis of disability in programs conducted by Federal agencies, in programs receiving Federal financial assistance, in Federal employment, and in the employment practices of Federal contractors. This was the first major legislative effort to secure equal access for people with disabilities.

[Individuals with Disabilities Education Act \(IDEA\)](#) of 1975: A law that makes available a free appropriate public education to eligible children with disabilities throughout the nation and ensures special education and related services to those children.

[Americans with Disabilities Act \(ADA\)](#) of 1990: The ADA is a landmark civil rights law that prohibits discrimination against disabled people in all areas of public life. Disability rights are civil rights. From voting to parking, the ADA is a law that protects people with disabilities.

[TBI Act](#) (1996) At the time, the TBI Act was the only federal legislation that specifically addressed TBI prevention, research, and service delivery through grants to states that were originally administered by the Health Resources and Services Administration (HRSA). The key federal agencies involved are: the Centers for Disease Control (CDC), National Institutes of Health (NIH), and the Administration of Community Living (ACL).

[People First of Tennessee, U.S. Department of Justice vs. Tennessee, Greene Valley, Clover Bottom and Nat. T Winston Developmental Centers.](#) (1996) In 1995, Greene Valley, Clover Bottom and Nat. T Winston Developmental Centers were the subject of an investigation by the U.S. Department of Justice and a lawsuit was brought by advocates for people with disabilities over conditions at the three institutions. After two decades of work to improve the state's service delivery system, all parties agreed to an Exit Plan in January 2015, which included the closure of GVDC. Testimonials: <https://www.mouthmag.com/peoplefirst.htm>

[Olmstead v. L.C.](#) (1999): This Supreme Court ruling affirmed the rights of individuals with disabilities to live in their communities rather than be institutionalized.

National Websites

State Resources

The [Tennessee Disability Coalition](#) Tennessee Disability Coalition is an alliance of organizations and individuals joined to promote the full and equal participation of people with disabilities in all aspects of life. To support this mission, the Coalition offers the following programs:

- Public Policy Program
- Americans with Disabilities Act (ADA) Program
- Family Voices of Tennessee
- WorkAbleTN
- Brain Links
- Discretionary Small Grants Program

[2024 Tennessee Disability Score Card](#): Tennessee Disability Coalition's ratings of Tennessee's policies, practices, opportunities, and outcomes for residents with disabilities.

[Disability Etiquette Guide](#): Etiquette suggestions for interacting with people with disabilities.

[Statewide Independent Living Council of Tennessee](#) (SILC) The Statewide Independent Living Council (SILC) is an independent nonprofit governed by people with disabilities. Our goal is to advance advocacy and independence for Tennesseans with disabilities by collaborating with all interested parties. We believe that people with disabilities are the best experts on their needs.
